

# Cable package retrofit

Engine cabling and connections are worn over time, causing bad connections and periodic errors in the safety and monitoring system. This often triggers false alarms and causes risk of unintentional operational delays.

We recommend to have this retrofit done in due time, as worn cabling potentially will leave your vessel out of service, until the retrofit is performed. Being pro-active will save you time and money.

Retrofitting existing cables and connections fitted on the engine, and installing the cable package retrofit requires an Everllence superintendent with expert knowledge of the engine and cable installation.

If you have any maintenance planned in the near future, we recommend ordering the cable package retrofit now, and have it installed by the superintendent while on board already.

Please contact your Everllence PrimeServ office for more details.

# Cable package retrofit

Retrofit engine cables and connectors to secure your operational uptime

## Key benefits

- Avoid system failure and vessel down time
- Order now, install when convenient
- 3 days installation (Estimated)

## Scope of supply

- Complete cable package
- All relevant connections and plugs
- Fittings and cable glands

## Applicable to

Applicable for propulsion engines L27/38 and L21/31

## More information

Contact your local Everllence PrimeServ office for more information about the product and how the upgrade can improve your propulsion configuration.
